## >PROJECT WORK

**DANI (Developing And Nurturing Interface) | Software Developer | [github.com/saronnhong/dani](https://github.com/saronnhong/dani) | [dani-ap.herokuapp.com](https://dani-ap.herokuapp.com)**

2019

*Full Stack MERN application that provides children with autism a source of entertainment and learning.*

- Inspired by team mate's autistic brother who is soothed by various tasks on a phone.
- Created suite of components using Reddit API, React Canvas Draw, Photo Sphere Viewer, and React Player.
- Designed front end layout and created reusable Menu and Sound components that allowed for easy construction of Animal, Relaxation, and Nature Sounds sections.
- Created a simplified Spelling game that gradually grows more difficult as the user progresses.
- Stored user metrics on a MongoDB database to analyze the interests of the child.

**Wat2Watch | Software Developer | [github.com/saronnhong/movie\\_gen](https://github.com/saronnhong/movie_gen) | [wat2watch-p2.herokuapp.com](https://wat2watch-p2.herokuapp.com)**

2019

*Application that finds new movie recommendations based on user's likes and interests.*

- Full Stack application that collects information through user surveys and favorited movies, stores and analyzes it in a MySQL database, and gives the user movie recommendations.
- Used Unirest to create requests to The Movie Database API on the backend to populate our search queries and keep API keys secure.
- Manipulated data stored in MySQL database to form algorithm for recommended movies for user.

**ChowFeed | Software Developer | [github.com/saronnhong/ChowFeed](https://github.com/saronnhong/ChowFeed) | [saronnhong.github.io/ChowFeed](https://saronnhong.github.io/ChowFeed)**

2019

*Front end web application that provides the user a way to find certain dishes at restaurants and a recipe for the dish at the same time.*

- Used the Food2Fork API and the Yelp Fusion API to query search results for recipes and local restaurants.
  - Stored search results in Local Storage in order to use pagination without separate AJAX requests.
  - Designed the look and layout of the application using Bootstrap.
- 

## >EDUCATION

**Full Stack Web Development Bootcamp, University of California, San Diego Extension**

2019

**Bachelor of Science in Electrical Engineering, University of California, San Diego**
